# ABOUT US

Oral and Dental Health Polyclinic provides meticulous, safe and quality service with its expert staff and superior technology. Services at the clinic are available for both children and adults.

With our belief in the importance of correct diagnosis, planning and treatment of oral and dental health, in our clinics, we continue our work with the happiness and pleasure we get from our profession and our dear patients.

# ACCOMMODATION

Located in Antalya's most decent district, Muratpaşa Lara, Tema 242 Hotel is on the seafront and offers rooms with private balconies offering a unique Mediterranean view. Opened in June 2021, the facility has been designed with completely renovated furniture and equipment.

Tema 242 hotels are located by the sea, our facility is located right in front of Muratpaşa Erenkuş Beach, which is known as the best beach in the city center, and the swimming pool with sea view offers you a unique sunbathing pleasure.

In the sunbathing area of the swimming pool, you can either read your book accompanied by the view of Antalya, or enjoy the alcoholic and non-alcoholic drinks prepared specially for you by our facility. Our patients, who have made the decision to purchase, can also choose the hotel they will stay in.

In such a case;

- If the hotel you choose is in the city centre, a £35 per night discount will be made from the treatment price.
- If your hotel is outside the city centre, £10 per night will be added to your treatment price.

All rooms of Tema 242 Hotel are decorated with modern furniture and warm colors. Rooms are equipped with amenities such as free wifi, hair dryer, satellite TV, water heater, tea and coffee equipment, safety deposit box, mini bar and air conditioning. Tema 242 Hotel is about 13 km from Antalya International Airport, 14 km from Antalya Bus Station, Kaleici. You can reach numerous restaurants, parks, walking paths, markets, hospitals, shopping malls and public transportation stops that you can easily reach anywhere in Antalya within walking distance if you wish. You are also invited to experience the comfort and flavors that will add pleasure to your travels. .

# VIP TRANSFER

## TRANSPORTATION IN THE CITY

We will provide you with all the necessary transportation for your treatment free of charge by the VIP vehicle starting from the airport during your treatment.

## **ANTALYA IS HEAVEN ON EARTH**

The Antalya Region, offering all the mysticism of past in our day, is now called the "Turkish Riviera" due to its archaeological and natural beauties. Antalya is the place where sea, sun, history and nature constitute a perfect harmony and which also includes the most beautiful and clearest coast along the Mediterranean. The city still preserves its importance as a center throughout history in the south coast of the country, in addition to its wonderful natural beauties. The mythological city which housed the Gods and Goddesses now exhibits all its secrets and marvels to mankind.

Antalya is located in the west of the Mediterranean region. In ancient times it covered all Pamphylia which means "the land of all tribes". The land really deserves the name since it has witnessed many successive civilizations throughout history. In 1st century BC the Pergamum king Attalus ordered his men to find the most beautiful piece of land on earth; he wanted them to find "heaven on earth". After a long search all over the world, they discovered this land and said "This must be 'Heaven' " and King Attalus founded the city giving it the name "Attaleia". From then on many nations kept their eyes on the city. When the Romans took over the Pergamene Kingdom, Attaleia became an outstanding Roman city which the great Roman Emperor Hadrian visited in 130 AD; an arch was built in his honor which is now worth seeing. Then came the Byzantines, after which the Seljuk Turks took over the city in 1207 and gave it a different name, Adalya, and built the Yivli Minaret. The Ottomans followed the Seljuks and finally within the Turkish Republic it became a Turkish city and an important port. Antalya has been growing rapidly since 1960 and its population is 1,146,109 according to the 1990 census.

# BEFORE/AFTER

# TREATMENTS

## Dental Implant Treatment

Dental implants are arguably the best alternative to natural teeth today. They are designed in the form of tooth root and are made of titanium to replace lost teeth in the mouth. While dental implants provide better speech and chewing function than traditional bridges and prostheses, they also stand out with aesthetic advantages. In cases where the jaw bone is sufficient, it is generally expected 2 - 3 months for the dental implants applied with a simple operation to fuse with the bone.

## Zirconium Crowns

Zirconium is a white-coloured substance for a tooth replacement or to improve the aesthetic look of your smile. In zirconium treatments, there is no need to support the zirconium itself with a metal substructure. Zirconium is transformed into zirconia ceramic in special furnaces instead of its pure mineral form. Zirconium crowns are from the group of non-metal supported crowns and offers a more natural appearance for the tooth compared to the old-fashioned versions of the crowns such as metal-fused porcelain. The light transmittance of zirconium crown is higher than a metal-fused porcelain crown which makes it the high-demand type of crown in cosmetic dentistry. It does not create a dark tone beneath your crown, and you would therefore not experience any problems such as a dark-ish reflection from the gum line.

Thanks to the light transmission feature of the zirconium crown, the matte appearance disappears, and a healthier, more transparent and more natural appearance is achieved by getting the teeth to its closest appearance to their original form. Zirconium crowns are biocompatible with the human body, which makes them non-allergic, and you can get your crowns therefore without any doubt. Zirconium crown is an ideal type of dental treatment for patients with perfect white smile requests. People who use zirconium crowns do not experience sensitivity towards hot or cold after the application. In addition, zirconium is stronger in substance compared to metal-fused porcelain crowns, over your teeth.

# TREATMENTS

## Smile Makeover

Smile design means to improve a person's smile to the desired state with techniques such as veneers, bonding, whitening, gingival (gum-related) operations, bridges, and lip shaping. An accurate smile design is determined by both the doctor and the patient. Thanks to the computer-assisted design programs, your smile is designed in accordance with your impressions that results in perfectly prepared and completed treatments.

## Teeth Whitening

In Zoom Teeth Whitening technique, which is the most effective result with the least active ingredient in the teeth whitening techniques and recommended by Kusadasi Lotus Dental Clinic dentists, at least two tones of whitening can be provided on your teeth with minimum sensitivity after fifteen minutes of sessions.

Zoom whitening sets, which we can support with the home whitening kit, are personal, one set can only be used in one person. This is guaranteed by Philips Light Chip technology.

## Porcelain Veneers

We can say that the porcelain laminates is the fastest and healthiest way to achieve the ideal smile aesthetics. Ceramic laminates, known as leaf porcelain, in some sources that can be applied with minimal intervention to the tooth tissue and even without intervention in some cases, can be digitally designed and produced in the same day with CEREC system in Akdeniz Dental Clinic. You can get detailed information about porcelain laminae that provide ideal smile aesthetics in one session from

# TREATMENTS

## Aesthetic Composite Bondings

Amalgam fillings, known as black filler or metal filler, have been used successfully in a period of nearly a hundred years, but have left their use to composite filler in the last decades.

Due to the mercury contained in the amalgam filling, it has been recommended in recent years to replace the existing amalgam fillers with composite fillings, especially holistic dentistry strongly advocates the removal of amalgam fillings out of the mouth.

In Akdeniz Dental Clinic, his team replace your amalgam fillings with composite fillings with the help of the technical equipment needed.

Replacing your existing amalgam fillings with aesthetic white composite fillings is safely performed at Akdeniz Dental Clinic

## E-Max

Crafted from high strength porcelain and custom-made for the individual, Emax Veneers are thin layered and bonded to the front surface of the teeth. This enhances both the function and appearance of teeth.

## Laminate

In dentistry, a veneer is a layer of material placed over a tooth. Veneers can improve the aesthetics of a smile and protect the tooth's surface from damage.

There are two main types of material used to fabricate a veneer: composite and dental porcelain. A composite veneer may be directly placed (built-up in the mouth), or indirectly fabricated by a dental technician in a dental lab, and later bonded to the tooth, typically using a resin cement. They are typically used for treatment of adolescent patients who will require a more permanent design once they are fully grown. In contrast, a porcelain veneer may only be indirectly fabricated. A full veneer crown is described as "a restoration that covers all the coronal tooth surfaces (Mesial, Distal, Facial, Lingual and Occlusal)"[citation needed]. Laminate veneer, on the other hand, is a thin layer that covers only the surface of the tooth and is generally used for aesthetic purposes. These typically have better performance and aesthetics and are less plaque retentive
